Sign up for the new AP Computer Science Principles course

Think about your life without the Internet, social media, and other applications that you use every day. Crazy, right? Wouldn't it be cool to learn how the Internet *really* works, how to make apps, and become an innovator and problem solver through the power of computing? Welcome to Computer Science Principles!

No experience needed

AP CS Principles is a brand new course for all students (yes, that means you). No matter how much or how little you know about technology, AP CS Principles will give you the skills you need to navigate the high-tech world we live in.

What will you learn in AP CS Principles?

- How people are using computer science to change the world with breakthroughs in every field — from medicine to music, fashion to business.

- How apps and websites like Instagram and tumblr actually work

- The benefits and downfalls of living in an increasingly online world

- How to collect, understand, and tell a story with data

Work on projects you care about

In class, you'll get to express your thoughts and opinions while collaborating with your friends to build projects. Activities you'll do in this class are designed to build off what you're interested in, like creating apps that you can share with your friends, and developing and pitching innovative solutions to everyday problems.
